This procedure is an examination of the entire colon, or large bowel. It is designed to help explain symptoms such as bleeding, change in bowel habits or abdominal pain. It permits the taking of biopsies and the removal of polyps, if any are found. You will be asked to sign a standard consent form. Like other invasive procedures in medicine, there is a small but real risk to colonoscopy which includes bleeding, infection and perforation which may require surgery. This is not a perfect exam and may even miss pathology such as polyps and cancer. By signing the form, you are acknowledging that you are aware of this. Please feel free to ask any questions at 718-336-3900.
